

Observer v 2.7

Exploring OLAP Cubes

Genetic Thought Software Inc.

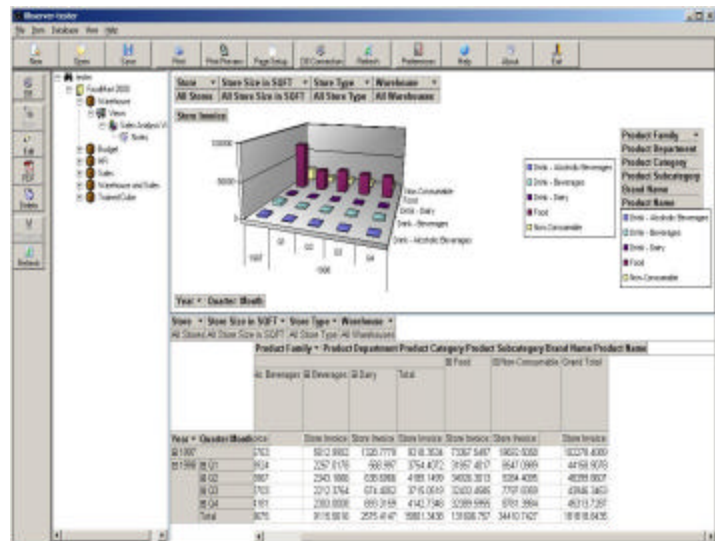

Smart , Affordable, Reliable Software

The **GT Observer** is a standalone windows application, that navigates and explores OLAP cubes developed by MS Analysis Services (SQL Server). It replaces and enhances the current practice of using MS Excel to interrogate OLAP cubes by defining pivot tables.

The **GT Observer** offers an easy to use interface with hierarchical tables, 2 and 3 dimensional charts, which help OLAP users increase productivity without moving between a large number of documents.

The following is a summary of the features and advantages:

- Flexible and easy to use exploring features for the cube results.
- Easy definition of different views, including saving the views and connections to local files.
- Documentation and archiving of comments
- Easy way to view the different attributes of the cubes.
- Print the views and the notes associated with them.
- Publish the view and its notes to a PDF

A full functioning version of the Observer can be downloaded for free testing for a period of 15 days.

Please visit our website at www.GeneticThought.com to order the Observer online and receive a license online.

System Requirements

- ✦ Windows 2000, 2003, XP (all versions).
- ✦ 256 MB memory and processor of 1GHz or higher.
